

## SPEDMAN Global Logistics Group

Transportation of goods generates environmental impacts, such as air, sea and noise pollution, all factors that have a negative effect on the environment globally as well as locally. The consequences of our business activities contribute to global warming, and we are aware of this.

The SPEDMAN Global Logistics Group recognises that the basis of environmental concern is a healthy respect for others. By applying the good use of technology, systems routines, and awareness amongst our employees, we will strive to minimise any disturbances to both the local and global environment as well as to the quality of life of the local communities in which we operate.

Our major environmental impacts are associated with the use of fuel, road traffic, disposal of waste and energy use. We are committed to reducing these negative impacts as far as possible and will:

- comply with all statutory regulations and other requirements relating to our operations
- focus on environmental objectives and targets and ensure our partners and collaborators do the same
- monitor our performance and strive for continual improvement and prevention of pollution
- lead by example in striving to use providers dedicated to the reduction of fuel consumption and to minimise waste disposed to landfill
- communicate our policy and requirements to all persons working for us, or on our behalf.

We rely on a model of continuous improvement in our environmental processes, being convinced that it is the most efficient formula, for the development of a correct management systems.

Our environmental policy will be reviewed annually to ensure its effectiveness, and to serve as a frame of reference, for establishing and reviewing quality and environmental objectives.
